

# **1 Introduction**

## **1.1 Purpose**

The purpose of this document is to provide a detailed description of how to use Selenium to solve an online  $9 \times 9$  standard Sudoku puzzle from Web Sudoku.

It will be a useful reference for people who want to write a Sodoku solver software or how to use Selenium with Python3, or both. On the other hand, it also allows puzzle solvers to check their work or provided answers directly if they got stuck.

## **1.2 Scope**

This software will not include any Sudoku solving-strategies, instead of using computer science algorithm, backtracking, which will directly output the result of the puzzle.
